ABOUT ME

Graduate in Informatics Engineering seeking a role in software development, with a particular interest in backend development and algorithm design. I have experience with Data Structures and Algorithms, Object-Oriented Programming, Design Patterns, and SOLID Principles. During my bachelor's degree, I took courses covering a variety of computing areas, including Artificial Intelligence, Databases(Relational and Non-Relational), and Computer Graphics.

EDUCATION

Bachelor in Informatics Engineering | University of Aveiro, Department of Electronics, Telecommunications and Informatics

2023 - 2026

Aveiro, Portugal

- The course focuses on fundamental areas of knowledge, such as Web Technologies, Software Engineering, Databases, Cybersecurity, and Artificial Intelligence.

PROJECTS

Slime Slayer |  | 

02 2026 - 06 2026

- Simple game built with Three.js and TypeScript where you play as a soldier, and are met with slimes spawning from above. Your goal is to manage health by avoiding damage and collecting periodic health packs. You win by killing 5 slimes and lose if your health drops to 0.

Distributed Sueca Engine | 

10 2025 - 06 2026

- Distributed implementation of the card game Sueca using Python, multi-threading and sockets. I was responsible for building the prototype which is archived under Older Versions/Backend/sueca_1.2/
